water?

I have always been

WHERE DOES WATER COME FROM?

# Primary Water A Renewable Resource

- ❖ The elixir of life for everything
- ❖ What if you were told that Earth's most abundant source of water is found deep in its core – and is stored in its rocks ?
- ❖ What if you learned that the abundance of this water may exceed the amount of water in our oceans by at least 4-5 times and can most easily be obtained through strategic drilling?

The term Primary Water was coined by the late Dr. Stephen Riess, the geophysicist who independently discovered its existence •

- ❖ Primary Water isn't a mystery, though access to this technology has been largely suppressed historically
- ❖ Along with its abundance, the advantages and value of Primary Water include that it is clean water which has never been in contact with the atmosphere.
- ❖ It is readily available in drought as well as normal rainfall years.
- ❖ . All water originates as Primary Water deep in the mantle of the Earth
- ❖ . Under pressure, it then makes its way to the surface via faults and fissures in the form of volcanic steam, artesian springs, geysers, and oases

The defining characteristic of Primary Water is that it has never before been on the surface of the Earth and is therefore free of surface pollutants

- ❖ Skilled Primary Water experts are able to locate the water as it nears the earth's surface, thus reducing the depth of drilling normally required for water wells
- ❖ Thousands of Primary Water wells already provide fresh water in Australia, the United States, and Africa
- ❖ Primary Water is a valuable source of water that could also help refill reservoirs, resupply overlapped rivers such as the Colorado River, and support agricultural needs

# The Father of Primary Water

## Stephan Riess 1898-1985

“My discovery was put to a field test by locating and drilling many wells. The records to date from these tests is 70 producing wells out of 72 attempts, all drilled in hard rock, all located in distress areas generally considered unproductive.” -- Stephan Riess (1954)

## Paul Pezart

### Biography

Paul Pezart completed his Honors in the US in 1958 at the age of 15 in his native town, Searsville, Oregon. He attended Oreg. Coll. (high school) where he met Stephen Evans who was studying in the sciences of Primary Water. After graduating he went on to College in DC. Steve Beckett is also a former of George's who along with Pezart, had an apprenticeship with Stephen Evans who became his mentor's teacher and another program with him in 1965. Besides working as a Public Geologist Paul Pezart also became a current mentor, successful builder and real estate investor throughout California.

A list of Paul Pezart's major Primary Water drilling projects during this time, including depth & location, follows (not necessarily in order):

1961 River Property, Siskiyou Mountain, Yreka Co., 1 well, 400' Monterey Shale, 50 gpm

1961, Colusa Co., Mokelumne Desert, 1 well, 300 to 1000 feet deep, ca. 70 gpm

1962 Siskiyou Mountains, 2 additional in Yreka Co. (both at 100' Monterey shale, 100-200 gpm)

1963 Coyote Valley, Butte Co. CA, 100' water table, 100' (1963) (1963) (1963) after completion, San Francisco 1971, 1 mile from San Andreas fault

1964 Three Rivers, Tehama Co., 200' glacial gravels, 500 gpm

1970-1971 Siskiyou Mountains, Yreka Co., 1 well, 100 feet 100 gpm, water surface 8' additional, 100 to 150 gpm, 100' (1970), 200' (1971), 200' (1971)

# Primary Water Advantages

- ▶ Provides excellent quality, clean, unspoiled water
- ❖ Never dries up not subject to drought
- ❖ Refills depleted ground water supplies
- ❖ Can be localized to meet the needs of individual communities
- ❖ Does not cause subsidence
- ❖ Horizontal drilling can be used to benefit fish and wildlife by refilling dried up streams

# Food for Thought

- ❖ According to Riess, the oceans have increased in volume by 1/3 from the primary water added to the water supply each year
- ❖ So, is this why the oceans have risen?
- ❖ If there is no fresh water out in the oceans, how did ships stay at sea for long periods of time? Sue Trumpfeller calls it Pirate Water
- ❖ What about native islands with no modern desalination infrastructure?
- ❖ Why is Primary Water not being more widely pursued to provide for the inhabitants of the Earth?
- ❖ What are some ways to expand on this?

# What others have to say about Veda Austin

"A remarkable investigation. Veda Austin has produced some interesting and impressive images which go way beyond what would be expected on the basis of conventional science. I hope that her pioneering work will stimulate others to follow up with systematic investigations of their own".

- Rupert Sheldrake, PhD, Fellow of the Institute of Noetic Sciences, author of Science Set Free/The Science Delusion.

# Veda Austin

- ❖ "A wonderful blend of art and science. Some of the images are nothing short of amazing. Veda Austin has demonstrated how water responds to our thinking, in ways that I and others would have thought unimaginable. It now falls within the realm of science to see if we can explain what Austin has so beautifully demonstrated".
- ❖ – Gerald H. Pollack, PhD, Professor, University of Washington; Editor-in-Chief, WATER.

# About Veda Austin

- ▶ Veda is a water researcher, public speaker, mother, artist and author. She has dedicated the last 8 years observing and photographing the life of water. She believes that water is fluid intelligence, observing itself through every living organism on the planet and in the Universe.
- ▶
- ▶ Her primary area of focus is photographing water in its 'state of creation', the space between liquid and ice. It is through her remarkable crystallographic photos that water reveals its awareness of not only Creation, but thought and intention through imagery.

# Veda brings a message of hope and joy from the very source of life itself

- ❖ She says “Water is transparent, it knows no colour, creed or religion. Water does not judge, nor does it label, it will enter the body of an ant as easily as it will enter the body of a king, or a homeless person or a tree or a dragonfly.
- ❖ Water is our constant companion, from the moment we are conceived it is always with us...even upon death, it is water that evaporates from the physical rising upwards into the Heavens.
- ❖ Veda sees water as Source rather than a resource, and considers all bodies of water to be sacred. Her passion for water extends out of the freezer and into primary schools where she donates time teaching water science and cleverly intertwines it with art projects.
- ❖ She loves to reconnect children to the living water systems inside and outside of their bodies, believing that the 'tamariki' (children) are the water bearers of the future.
- ❖

# The Secret Intelligence of Water

- ❖ You know how Spirit sends you what you need? I asked what could I present that I haven't seen before
- ❖ Veda Austin was the guest on a podcast that I came across
- ❖ What she has discovered and captured on camera is beyond Cymatics and Dr Emoto
- ❖ Veda actually interacts with the consciousness of the water
- ❖ The water seems to know what it is she wants to communicate and it responds with these amazing crystalline pictures you will see next

She wrote on paper and set the petri dish of water on top for 30 seconds before freezing

# Braided hair picture results

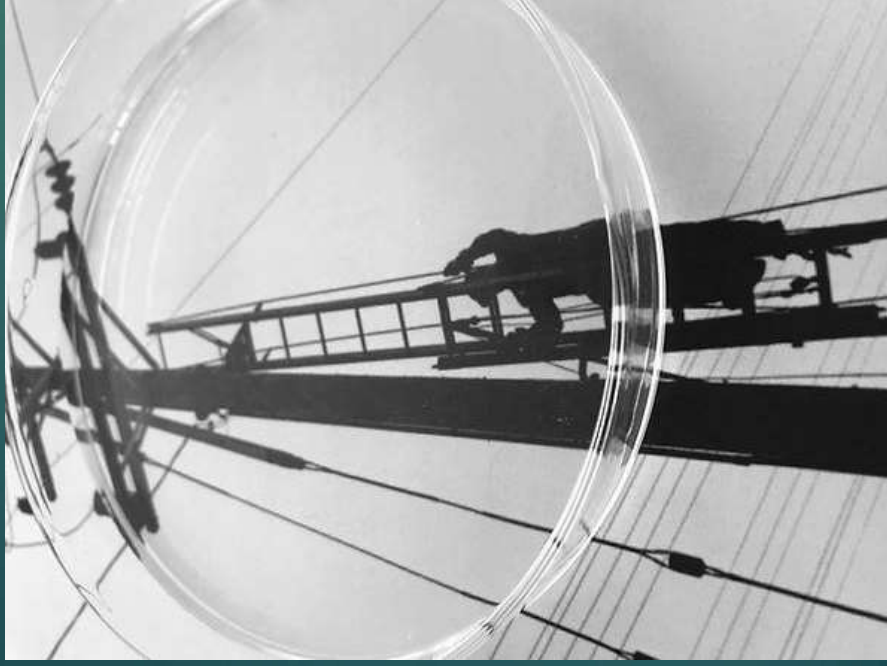

Again, the water is set on top of the picture for about 30 seconds

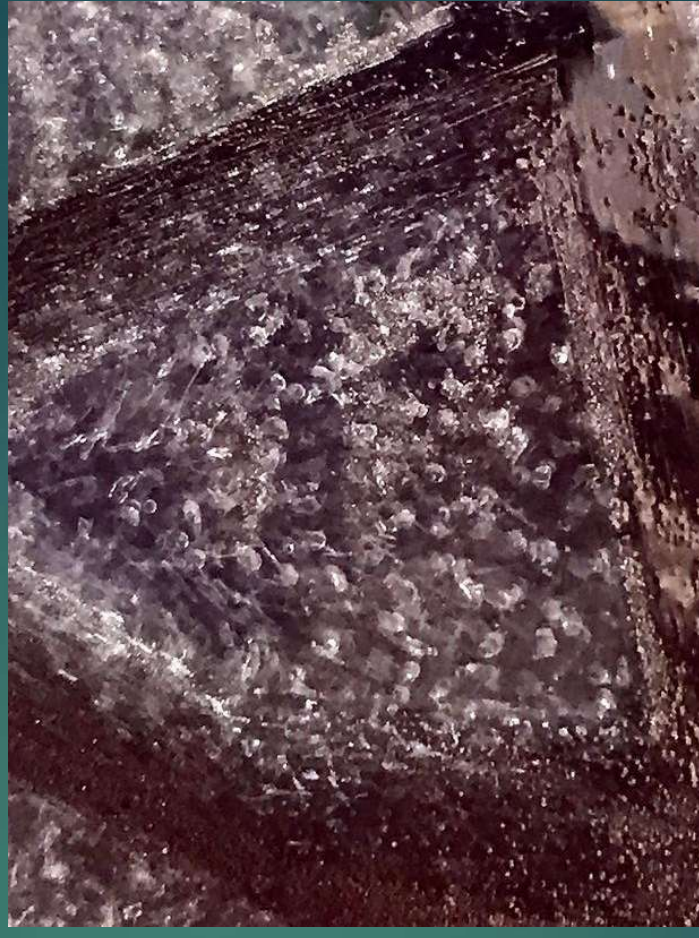

# Ginkgo Leaves

The pictures are taken just as the ice starts to freeze

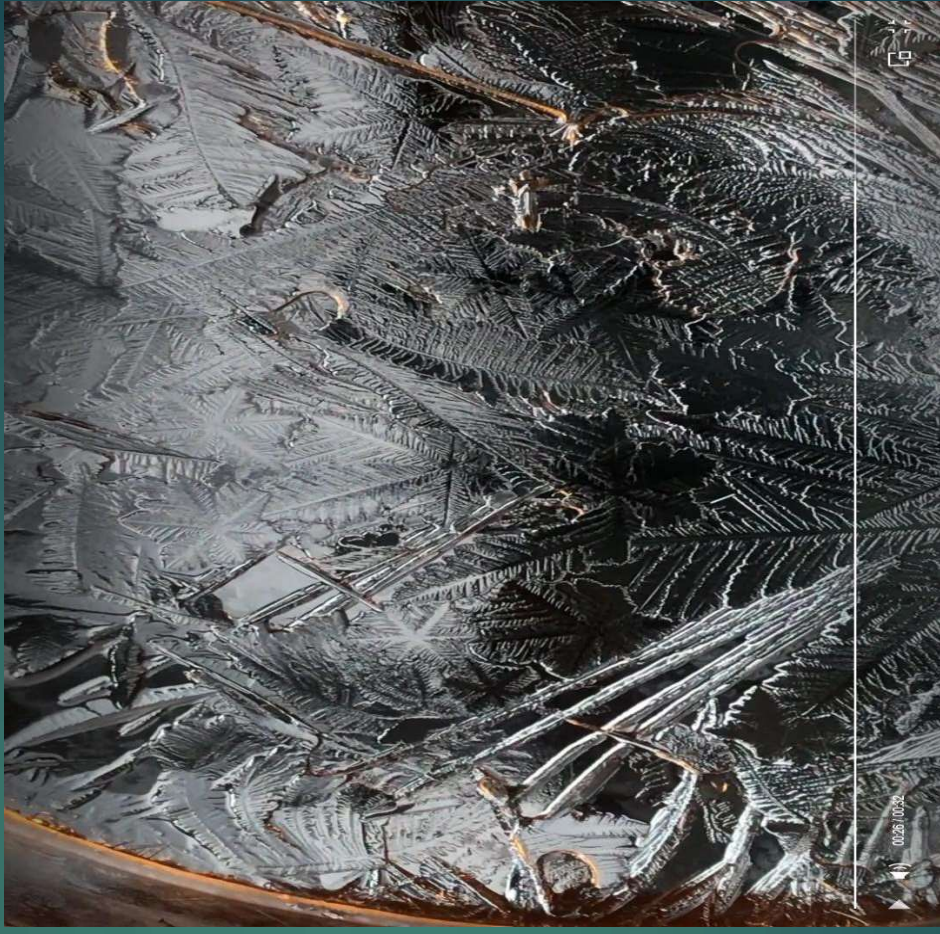

The Amethyst was placed in the water for 30 seconds before freezing

# Dr Masaru Emoto Quotes

“Water carries our thoughts and prayers,  
as you are water yourself.  
No matter where you are, your prayers  
will be carried to the rest of the world.”

-Dr. Emoto

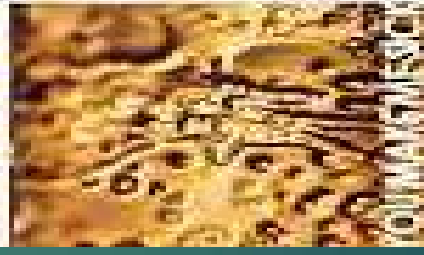

It's likely that only vibrations of  
love and gratitude appear in  
nature, and observations of  
nature shows this to be true.

Masaru Emoto
